Mr. Grandi

May 12, 2020

I decided to make a collage to represent my subject of maternal deaths in Sudan and Afghanistan. I used different materials like magazines clippings, chains, medication pills, metal art pieces, paint, and small beads to create my collage. I used a metal chain to outline a pregnant body. I used pills to represent the lack of medicine and access to healthcare. The picture of the baby represents life. I drew in blue marker the word mother in Pashto the language spoken in Afghanistan. The cross represents cultural beliefs and religion. I used magazine clippings with the words doctor, access, poverty, and antibiotics to show how women in these countries need but cannot get any of these. I tried to think about how all of these factors affect maternal mortality. I used reasoning to think about the facts and form my conclusion that many factors increase mothers' chances of dying in Sudan and Afghanistan.
